Transfer Cap Use

Step 1 - Identify the injection site, with the assistance of the arrow indicating the direction of flow from the outside of the bag.

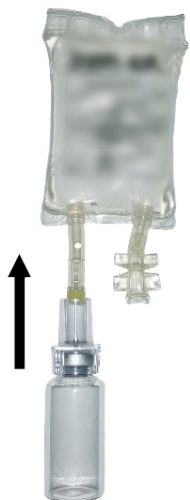

Verify the compatibility of the drug and the solution.

Remove the lid of the capsule from the bottle and clean the stopper with antiseptic.

Step 2 - Hold the hood with its paper cover up and pull off the cover.

Keep the cap with its outer package and push the wide end at the top of the bottle.

Step 3 - Perforate the sterile membrane by pushing in.

This allows contact between the solution and the concentrated drug to be diluted.

Step 4 - Pass the solution into the bottle by squeezing the pocket.

Shake well to mix.

Step 5 - In order to transfer the solution into the pocket Turn the pouch into a downwards position. Then squeeze the pouch.

Repeat the process if necessary.

Step 6 - When this process has been completed, remove the entire transfer cap / vial of the pocket.

THE TRANSFER DEVICE IS FOR SINGLE-USE ONLY.

THROW AWAY THE VIAL / TRANSFER DEVICE IN A SHARPS DISPOSAL CONTAINER.
